APEC Mexico 2002: Building Bridges for the Future

The 21st century has been called the century of the Pacific. Asia-Pacific is one of the most dynamic and fastest growing trade regions in the world, as well as one of the main sources and destinations of Foreign Direct Investment (FDI) flows. In response to the growing interdependence of the region, the Asian Pacific Economic Cooperation Mechanism (APEC) was created in 1989 to promote economic growth and development among member countries.

APEC aims to strengthen the Asia-Pacific community through economic growth and equitable development, trade and investment liberalization and facilitation, and economic and technical cooperation. APEC’s goal is to create a free trade area by the year 2010 for developed economies and by 2020 for developing ones, as stated in the Bogor declaration.

APEC’s 21 member economies (see map on p. 3) integrate 2.47 billion consumers who purchased goods worth $2.6 trillion in 1999. Approximately two-thirds of trade in the Asia-Pacific region was intra-regional.

APEC emphasizes open regionalism through unilateral liberalization efforts in Individual Action Plans. This mechanism complies with World Trade Organization (WTO) rules. Mexico endorses the view of having APEC promote a new round of multi-lateral trade negotiations in the WTO.

Over the past years, APEC’s achievements have centered on trade and investment facilitation measures, particularly regarding issues such as regulation, customs procedures, government procurement, intellectual property rights, and mobility of business people. It has focused mainly on the exchange of information, human resource development, establishment of non-binding principles, and data-base creation.

Chairmanship of Mexico in APEC 2002

Since Mexico joined APEC in 1993, it has been an active participant in promoting trade and investment. The combination of its geographic position --at the center of the Americas with access to both the Atlantic and Pacific Oceans-- its large and solid continues on page 3

Mexico Economic Update

TRADE BALANCE: Mexico registered a trade deficit of $313 million for April 2001, up from a $328 million deficit in April 2000. Total exports in April 2001 reached $13.30 billion, an increase of 7% with respect to the same month a year earlier, while oil exports amounted to $1.09 billion, down 11% from April 2000. Imports for April 2001 were $14.11 billion, an increase of 11% over the same month in 2000.

FINANCIAL INDICATORS: Mexico registered an inflation of 0.5% for April 2001, compared to 0.57% in April 2000. The leading Mexican interest rate, CETES 28, averaged 15%, 2 percentage points higher than the same month in 2000. The Mexican Stock Exchange Market Index (IPC) reached a maximum of 6,144 points, 1,396 points lower than the April 2000 level. The average Pesos/Dollar spot exchange rate (bid) for April 2001 was 9.24, compared to 9.39 Pesos/Dollar for the same month in 2000. International reserves reached a historic level of $40.38 billion in April, up 20% from their level a year ago. In April 2001, open interest at the Mexican Derivatives Exchange (MexDer) amounted 245,914, a decrease of 195,584 futures contracts traded over the same month in 2000.

EMPLOYMENT AND ECONOMIC GROWTH: Open unemployment reached 2.26% in April 2001, down from 2.45% in April 2000. Economic growth, as measured by the Global Economic Activity Index (IGAE), grew 1.9% in March over the previous year. The monthly IGAE measures 96% of the economy covered in quarterly GDP data.

INDUSTRIAL ACTIVITY: Mexico’s industrial production decreased 2% in March 2001 over the same month in 2000. Likewise, manufacturing output contracted 1.8%, mining activity increased 1.4%, and construction activity decreased 5.1%.

PUBLIC FINANCES: The Public Sector balance registered an overall surplus of $1.86 billion in April 2001, an increase of 14.2% in real terms with respect to the same month last year. On May 9, the Ministry of Finance announced the reopening of the 10-year Global Bond worth $1.5 billion placed last January. The reopening was for $1 billion with a yield of 8.43%, which is the lowest ever for any 10-year emission made by the Federal Government.

California Becomes the World's Fifth Economy
Mexico is its largest export market

In the mid 1990s, with the advent of the so-called “New Economy”, industries in Silicon Valley, California began to grow faster than the average of the rest of the US. According to the California Trade and Commerce Agency, in 2000 California produced over $1.33 trillion or 13 percent of total US output in goods and services. This makes the “Golden State” the fifth largest economy in the world, ahead of France’s $1.28 trillion gross domestic product, and nearing the UK’s $1.41 trillion economy.

Seven years after NAFTA’s implementation, the Agreement continues to provide substantial benefits to the Mexico-US trade relationship. California’s exports to Mexico are the latest example of NAFTA’s positive impact in strengthening North America as a regional trade powerhouse.

Data released by the US Census Bureau in 2000, showed that 15 percent of California’s exports were destined to Mexico. Today California ranks second among US states in its exports to Mexico and Mexico has become California’s largest export market.

In 2000, Mexico purchased $19 billion in Californian goods, an increase of almost 30 percent over the previous year and nearly tripling the amount bought in 1993, year prior to the entry into force of NAFTA. California’s main exports to Mexico include computers, mobile telephones, high-tech electronics, and industrial machinery. (For more detail go to p. 4)

NAFTA Works for California. Over the past 7 years, NAFTA has contributed to a dynamic Californian economy, which derives more than one fourth of its gross state product from international trade. •

Diario Oficial Notices

- Free Trade Agreement between Mexico, El Salvador, Guatemala and Honduras (June 1, 2001).
- Supplement to the requirements of the Ministry of the Economy in regard to import permits and sector promotion programs, published on January 30, 2001 (May 24, 2001).
- Final resolution regarding the circumvention of the antidumping investigation on imports of boneless bovine meat from the United States of America. (May 22, 2001).
- Resolution that discards the antidumping review petition and the antidumping duties imposed on imports of seamless pipe from the United States of America. (May 22, 2001).

Economy and its network of Free Trade Agreements (FTAs) make Mexico a strategic hub for trade and investment. By producing in Mexico investors have secure and preferential market access to 32 countries in 3 continents.

In 2002 Mexico will host and chair APEC activities. Mexico’s chairmanship implies responsibilities in terms of both the definition of the agenda and the organization of events and meetings. Currently, Mexico is defining the priorities in consultation with APEC members, academics, and the private sector.

The issues proposed by Mexico in the area of trade and investment liberalization and facilitation include:

• Strengthening of Individual Action Plans
• Support to new multi-lateral WTO negotiations
• Review of coherence of bilateral and regional free trade agreements with Bogor’s goals
• Deregulation and competition policies.

In the economic and technical cooperation field, Mexico proposes to focus mainly on small and medium enterprises in connection with e-commerce, microenterprises and human resources development.

With respect to the organization of APEC events, more than 100 meetings will take place in Mexico throughout 2002, including the following:

• 10th Economic Leader’s Meeting
• 14th Ministerial Meeting (trade and foreign affairs)
• Small and Medium Enterprise (SME) Business Forum
• Ministerial Meetings (finance, tourism, SME, women)

Philippines and Mexico was one of the shortest routes for European goods to reach Asian markets. Its geographic location made it a necessary link for world trade.

The Asia-Pacific region offers immense opportunities. Mexico sees APEC 2002 as the occasion to become a natural bridge to the Asian market, to develop strategic partnerships, to promote exports, and to learn from the experience of Asian economies. Further more, in APEC 2002 Mexico will strengthen links with Asia to establish a true partnership. Today’s advancements in transportation and telecommunications, combined with its network of FTAs, prime Mexico to become a leading economic player in the 21st century.

Mexico’s Vitro looks at possible China investment

According to its chief executive, Federico Sada, Grupo Vitro, the Mexican glassmaker, is negotiating a possible investment in China to boost its presence in Asia. He added that it would give them a competitive advantage in Asia to position themselves in other countries. In April, Vitro bought a 60 percent stake in Spanish company Cristalglass and said the move was aimed at boosting its position in the European market.

Select Readings

During the last decade, Foreign Direct Investment (FDI) became one of the main vehicles for the increasing integration of the world economy. Although most countries have started to compete eagerly for FDI, the consequences of increasing FDI flows are still a point of issue. Offering contributions from European and Asian perspectives, this book addresses the role, the determinants, and economic effects of FDI, and provides a blend of informal discussion, recent theory, and empirical analysis on FDI. It covers macroeconomic as well as microeconomic and financial aspects, including the effects on taxes, network effects, and multinationals.

The author argues that the United States cannot maintain its global leadership without the cooperation of like-minded nations that share its interests and values. In fact, in the coming years, American preeminence will likely remain stable only in regions where the United States has signed agreements with countries that have congenial economic and socio-political systems.
